PROFESSIONAL SUMMARY

Motivated Software Engineering student at Assiut National University with a foundation in software engineering, system analysis, object-oriented programming, database design, and web development. Currently participating in the Digital Egypt Pioneers Initiative (DEPI) Front-End Web Development track, with hands-on learning in HTML, CSS, Bootstrap, Git, and introductory back-end concepts. Contributed to academic team projects involving requirements gathering, software documentation, UML, DFDs, database design, quality assurance, testing, and problem solving. Seeking internship opportunities to apply technical skills and gain practical software development experience.

TECHNICAL SKILLS

Web Development: HTML5, CSS3, Bootstrap

Programming Languages: Python, Java, SQL

Software Engineering: System Analysis & Design, SDLC, UML, Requirements Gathering, Software Documentation

Database: Microsoft Access, Database Design, Relational Database Concepts

Tools: Git, GitHub, Figma

Core Skills: Data Structures, Object-Oriented Programming, Problem Solving, Teamwork, Collaboration, Quality Assurance

TRAINING & EXPERIENCE

Digital Egypt Pioneers Initiative (DEPI) — Front-End Web Development

Aug 2026 – Present

- Developed hands-on skills in HTML5, CSS3, Bootstrap, and Git through structured front-end training.
- Used Git for source control and collaborative development workflows.
- Gained exposure to introductory back-end concepts as part of the training.
- Applied web development concepts through practical tasks and exercises.

ACADEMIC PROJECTS

Smart Home Automation System — Quality Assurance / Test QA | Team Project

- Collaborated with a **5-member project team** on a Smart Home Automation System designed for Android and iOS.
- Performed QA activities across **3 testing stages**: unit testing, integration testing, and user acceptance testing.
- Participated in **6 major project phases**, including analysis and planning, design, development, testing and validation, deployment and documentation, and project closure.
- Supported testing of modules, sensors, application and IoT-device integration, and user acceptance; contributed to bug fixing and optimization.
- Worked within a project budget of **200,000 EGP** and a planned delivery deadline of April 1, 2025.
- Contributed to SRS, UML/DFD documentation, requirements analysis, and security planning.

Banking Management System (Microsoft Access) — Team Project

- Collaborated with an **8-member team** to develop a desktop banking management system.
- Built forms, queries, reports, and relational database tables.
- Implemented account creation, deposits, withdrawals, and balance management.

EDUCATION

Assiut National University — Faculty of Computers and Information

Software Engineering Department | **2024 – 2028 (Expected)**

RELEVANT COURSEWORK

Software Engineering • Database Systems • Data Structures • Object-Oriented Programming • Operating Systems
